About eGov Smart City 2015

It is understood that the concept of Smart Cities originated with IBM some times in 2008 .Smart cities is a concept aiming at radical shifts in urban infrastructure development , living and economic activities, efficient delivery of all services and community safety, and sustainability achieved through different configuration and designing of such cities, application of number of technologies and technology driven solutions notably the Information Technologies to link up all aspects of urban living. India is witnessing wide ranging transformations including fast growth in urban population driven by increasing literacy, job opportunities and quality of life. A McKinsey Global Institute report estimated that the number of Indians living in cities would grow from 340 million in 2008 to 590 million in 2030. Thirteen cities would have more than four million residents and half the population in five states would be urbanized. To keep pace with that, India would have to spend \$1.2 trillion or nearly 70% of last year's GDP on cities.

The Government of India has envisioned development of '100 Smart Cities' in the country to take care of growing needs of urbanisation and bridge the rural-urban divide. The smart cities should be able to provide good infrastructure such as, sanitation, water, reliable utility services, healthcare, education; ease of business; transparent processes and citizen-centric services, etc.

Most of the proposed new smart cities will be in proximity to manufacturing areas- as part of industrial corridors and industrial parks spread over different geographical parts of the country. Development of initial few smart cities has been already announced as part of Delhi - Mumbai industrial corridor. Development of smart cities shall not only bring much diversified stakeholders together but would rely very heavily on adoption of new technologies impacting all aspects of urban living. While Communication, infrastructure would be one of the backbones of such cities-Elets Technomedia Pvt. Ltd. believes the other equally important area would be the clean energy supplies and energy use efficiency.

The platform is bringing together government officials, investors, industry leaders and experts to discuss and exchange ideas, information, solutions, etc., on the opportunities and future requirements for developing smart cities in India.

Key Topics to be discussed in the conference:

- ◆ Smart City current trends
- ◆ Government's perspective
- ◆ Development of Smart Cities
- ◆ Disaster Management
- ◆ Financing Smart City Initiatives
